同じ語(句)を2度使わないという条件つき。

1 Once upon a time, there was an old man, living in a village, who had no family and no friends. The (1) thing on earth which had an attraction for him was money. Over the years, through hard work, he got together a (2) amount of it. Then one morning he made a hole in the earth by the side of an old wall and put all his money in it. Every day after that he went and took a (3) at it.

One of his workmen saw the old man going to the (4) place day after day. Looking out from the cover of a nearby tree, he saw him with his hands full of bright money, (5) it go back through his fingers into the hole in the earth. After the old man was back in his house, the workman went to the hole, took the money out, and went off with it.

The discovery (6) his money was no longer in its place was a great blow to the old man. Another man, in a nearby house, saw him at his window day after day, his head hanging down. At last he went to him and said, "Money is not (7) a seed. Nothing will come from it if you put it in the earth. Take this stick of wood and put it in the hole. (8) to yourself that it's your money. Then you'll be as happy as you were before. The stick will (9) you as good as the money did, because when you had the money you made (10) use of it.

| 6. like | 7. say | 8. no | 9. great | 10. that |

2 Every day, in all kinds of weather, many thousands (1) men and women jog. Why has jogging—running (2) for long distances—become so popular? Most joggers begin because they hear it is very good exercises. Jogging makes the heart stronger and helps people lose weight. It can also (3) them feel better about themselves.

Should you jog too? If you want to jog, be sure (4) ask your doctor for advice first. Jogging may be too much exercise for you.

Does jogging cost much? No, it costs almost nothing. But it is very important to have a good (5) of shoes that were made especially for jogging. They protect your feet and legs (6) the shock of running on hard surfaces.

How fast should you go? Jog with a friend and talk to (7) other as you run. If you have difficulty talking, you're going too fast.

How far should you jog? Remember not to go too far too soon. In fact, you (8) walk, not run, the first few times. Then do some short jogs, but no more than what you can do comfortably. After that, increase your distance a quarter or (9) mile every two weeks or so. Maybe (10) a few years you too can run in a marathon.

3 In the United States until recently, men were not supposed to cry. Crying was (1) and only for women. Men were supposed to be (2). But things have changed. Men have begun to think that it is all right to show their feelings. Women have learned that sometimes they can do something about a problem (3) of just crying. They try not to cry in a (4) place or in front of a frightened child.

Chemists have been studying (5) people cry. They say the body produces two kinds of tears. One kind cleans out the eye (6) it gets dirt in it. But when people cry because (7) their feelings, these tears have poison chemicals in them. The body is getting rid of chemicals produced by strong feelings.

In this country men have heart disease more (8) than women do. Doctors say this and some other diseases are related (9) the pressures of living and working in a modern society. It is likely that men suffer more (10) these diseases because they do not cry enough.

4 As the train approached the seaside town where I was going to (1) my holidays, I went into the corridor to stretch my legs. I stayed there a short while, breathing in the fresh sea air and exchanging a few words with one of the passengers, whom I had met earlier on the platform.

When I turned to go back to my seat, I (2) to glance into the compartment next to mine. Sitting there was a man who many years before had been my neighbour. He was a great talker, I remembered; it (3) to take hours to get away from him (4) he began a conversation. I was not at all (5) when he went to live in another part of London. We had not met since then, (6) did I wish to meet him now, when my holiday was about to begin.

Luckily at that moment, he was much too busy talking to the man opposite him to catch (7) of me. I slipped back into my compartment, took down my two suitcases and carried them to the far end of the corridor so as to be (8) to get off the train as soon as it stopped. When I got off the train, I called a porter, who carried my luggage out of the station and found me a taxi. As I went to my small hotel, I breathed a deep (9) of relief at my narrow escape. There was little (10) that I should run into that man again.

5 The next important event in my life was my visit to Boston, in May, 1988. (1) if it

were yesterday I remember the preparations, the departure with my teacher and my mother, the journey, and finally the arrival in Boston. (2) different this journey was from the (3) I had made to Baltimore two years ago! I was no (4) a restless, excitable little creature, requiring the attention of everybody on the train to keep me amused. I sat quietly beside Miss Sullivan, taking (5) with eager interest all that she told me about what she saw out of the car window: the beautiful Tennessee River, the great cotton fields, the hills and woods, and the crowds of laughing blacks at the stations, (6) waved to the people on the train and brought delicious candy and popcorn balls through the car. On the seat (7) me sat my big rag doll, Nancy, in a new dress and a bonnet, looking at me out of two bead eyes. Sometimes, when I was not (8) in Miss Sullivan's descriptions, I remembered Nancy's existence and took her up in my arms, but I generally calmed my conscience by making (9) believe that she was asleep.

6 When Peter takes a trip he usually goes on his own instead of traveling with an organized tour. He likes the freedom of deciding where he will go, (1) he will do when he gets there, and how long he will stay. He enjoys exploring remote areas (2) there are no tourists. His idea of travel is based on a desire to escape, at least temporarily, (3) all that is familiar. When he is in a foreign country, he is determined to participate, and not to play the role of a (4) observer. Perhaps that explains (5) Peter has so many exciting and memorable experiences during his travels.

Along with the advantages, there are certain disadvantages in traveling (6). To some people, not experienced in getting about, a trip can be and often is a series of minor catastrophes and disappointments: failure to understand the language, not being familiar enough (7) local customs to distinguish friendliness from hostility, not being able to ask directions and not understanding them when they are offered, not being able to get a taxi, taking the wrong bus and getting (8) at the wrong place, being stared at, eating unfamiliar food and spending sleepless nights in unfamiliar quarters. Even (9) travelers can have these problems, but despite these disadvantages, Peter still prefers to travel (10) himself.

7 The world's population in 1900 was 1,550 million. A quarter of the world's people lived in Europe. By the (1) of the century the world's population may reach over 6,000 million, and many more people live (2) Europe. In China (3) there are over 1,000 million people. The world cannot get bigger to make (4) for extra people. There is only one Earth to give us (5) from its soil and (6) from its mines.

In 1900 most of the world's people lived in small villages. Even important cities were not

nearly so (7) as they are now. Through the century people have moved into the cities. Nearly all the world's towns and cities have spread (8) into the country and (9) into the sky. Urban living has been made (10) by better transport and better building methods.

8 There are more than 400 million cars in the world today. Most have four wheels, though some have (1) three, and at least one has sixteen!

Saloon cars have a closed-in compartment for passengers, with a separate trunk for luggage. Station wagon are like vans (2) extra windows. They have a door at the back and rear seats which fold down to (3) more luggage space. Sports cars are designed (4) fast driving. Most carry only two people. Some have roofs which fold down. GT (Grand Touring) cars are saloons which (5) like sports cars.

The (6) petrol-driven cars were made in Germany in the 1800s. Passengers sat out in the open and, in Britain, someone had to walk in front waving a red flag. Early motoring was (7). But, in 1907, Henry Ford in America started to produce a cheap reliable car, the Model T. In the 1920s, a wide choice of cheap cars became (8) and the closed-in saloon body became popular. Since then, there have been (9) improvements but the basic design of the car has changed (10).

9 The moon is Earth's natural satellite. It is made (1) rock and is like a small planet. Astronomers often describe the Earth and the Moon (2) a 'double planet'. Our Moon is not much smaller than the planet Mercury.

Every year, the Earth and the Moon (3) a trip together round the Sun. While that is happening, the Moon is going round the Earth in orbit as well, but it always keeps the (4) side pointing toward us. Spacecraft have taken photographs of the 'back' of the Moon and they show that it is quite (5) to the side we can see.

You can often see the Moon on clear nights and something even (6) the day. Just like the Sun, it rises and sets each day because the Earth is turning on its axis. It (7) the Moon one month to make a complete orbit round the Earth. In that time, its apparent (8) changes from day to day. It goes (9) being a thin crescent through to full Moon and back again. These different shapes are (10) the Moon's *phases.

10 Tornadoes, the most violent of all storms, (1) in all 50 of the United States, but most of them strike in Tornado Alley, a belt (2) from Texas northward toward Canada. They happen all the year round, but mostly in April, May, and June, and (3) 3 and 7 P.M.

Born from thunderstorms, tornadoes develop there when warm, moist air from the Gulf of Mexico (4) with cold air coming across the Rocky Mountains. The typical *funnel-shaped cloud, visible because of its moisture content, is a column of swirling air (5) speeds of 170 to 250 miles per hour.

Although how tornadoes are formed is not fully understood, *meteorologists are becoming successful in forecasting them by (6) special radar. They can alert people 20 to 30 minutes (7) a strike.

If you are on the road and in the path of a tornado, stop the car at once, jump out, and (8) facedown in a ditch or hollow. If you are in a building, go to the basement, or (9) for a small, windowless ground-floor room—a bathroom, hall or closet — away (10) the impact of the storm.

11 They live with their mothers, sisters, aunts, nieces, and nephews, and an old grandmother, (1) is the head of the family. They show emotions such as joy, sorrow, anger, and friendliness. They become excited (2) they meet old friends. Who are these people? They are not people; they are elephants!

Elephants are the largest land animals on earth. A grown-up male African elephant can weigh six tons and (3) 12 feet tall. Females weigh about half (4) much as males, and are about four feet shorter than males. A new-born elephant weighs about 260 pounds and stands about three feet (5). Elephants usually have two tusks. These are long, pointed teeth that extend from the elephant's (6). The tusks of an old male may reach nine feet (7) length. Elephants only use their tusks to protect (8). They do not use them to kill, because elephants are vegetarians; (9) is, they do not eat any meat. They only eat (10).

12 In the year 400 BC the ancient Romans had only a small area of land in the center of Italy, but (1) the next 700 years or so they conquered and spread over what is now the (2) of Italy, France, Belgium, Holland, Spain, Portugal, England, Greece, Rumania and parts of Germany, *Asia Minor and North Africa. Then the Roman Empire declined and fell. There has been much argument about (3) this could have been caused by.

The most popular idea (4) to be that the Romans, who had been strong, very moral

and full of courage, became soft, lazy, and immoral (5) they had slaves and foreigners to do all the work and fighting for them (6) they lived a life of comfort and pleasure.

However, modern studies suggest that the Romans must have been so (7) weakened by disease that they no longer had the strength or the numbers to resist their enemies abroad. In AD 165, soldiers who (8) been fighting in Mesopotamia brought a new illness, *smallpox, back to Rome. The Romans had no natural *immunity to it, and it killed (9) many as one third of the inhabitants in part of the homeland in Italy.

During the following century other waves of diseases attacked Rome. Between AD 251 and 266, large numbers of people died every month in the city of Rome alone, probably from *measles, (10) had come to Europe for the first time.

13 Men's fear that he may by accident destroy the world by atomic explosives is not (1) reason. The discovery of the *explosive materials used to build atomic weapons occurred by accident. Ancient man knew (2) of explosions. It is thought that the gun was the result of a chance discovery, and (3) explosive weapons developed after an ancient scientist accidentally set fire to some explosive material, which flew up into the (4). Perhaps when the scientists thought about these explosions, they got the idea (5) the first gun.

The discovery of explosives came late in Man's history, (6) after the ship, the wheel, and even atomic theory. Explosives were first written about only 600 years ago. It is probable that the first simple ones may have been set (7) about 1,000 years ago. Some explosives, shot from wooden tubes, were reported in Chinese history (8) the thirteenth century. Other people in Asia made stronger wooden tubes and used them (9) throw sharp weapons — the first (10) guns.

14 In the old days, it was easy to talk about British society. There were the working class, the middle class and the upper class. There were factory workers and farmers, northerners and southerners. But these days it is (1) to describe the British. The old differences are still there, but people are divided in many new ways as (2).

One difference is the change in age groups. More people are living longer than seventy or eighty years, so the number of (3) people is growing. At the same time, fewer babies are being born. This means that the population of Britain is (4) older all the time.

The four different regions of the United Kingdom (England, Scotland, Wales and Northern Ireland) have always had their own ways of life. But now many people from these

regions (especially the Welsh and the Scots) have a new interest (5) their own special culture. Some Welsh people, (6) example, want to bring back the old Welsh language. Some of the Scots want a government of their own. The people of Northern Ireland often feel (7) the rest of Britain is not interested in them. They feel that no one (8) the "troubles" between Catholic and Protestant that have been going on for so long.

But somehow, the traditional British way of life still goes on. Old and young, rich and poor, black and white all agree about some things even (9) they disagree about others. The things they agree about make them British. The things they (10) about make them interesting.

15 In the late afternoon, if you look eastward a passing shower you will see one of the most glorious sights in the world. You will see part of a (1) of brilliant colors which we call a (2). It was Newton (3) first discovered the secret of the rainbow: that the water *droplets of the rain break up the sun's light into various colors.

This is the (4) it happens. The sun shines from (5) your back on to the water drops in front of you. The sun's *rays hit the water drops and become *bent as the rays go through one side of the drops. Then the rays are *reflected from the back of the drops toward you. (6) is made up of all colors, and each color bends a little differently as it goes through the raindrops. Violet is bent the most and red is bent the (7), so when all the light is reflected back to you, you see part of a circle which is red on the outside, then orange, yellow, green, blue, indigo, and finally violet on the (8).

Remember, you can only see this beautiful sight if there is a sun shower and you are standing (9) the sun and the rain and you are looking in the (10) of the shower.

18 The first great World War began in Europe in 1914. On one (1) were the Central Powers led by Germany and Austria-Hungary. Against them were the Allied Powers. The large nations on that side were Great Britain, France, Russia, and later Italy. During the first years of the war, the United States felt that it would be foolish to (2) involved in a European war. They maintained their neutrality. Their sympathies were (3) the Allies from the very beginning. Their language, their customs, and their institutions were mainly English in origin. Many immigrants had come from the allied countries.

Their sympathies turned more and (4) to the Allies as the Germans invaded neutral Belgium and engaged in other military activities of which they disapproved. The British controlled the Atlantic Ocean and the trans-Atlantic cable. Through this control the British were (5) to send their propaganda to the United States, (6) very little of the German explosion of events reached America. In (7), American businessmen and bankers had ten times as (8) business and investment with the Allied Powers (9) with the Central Powers. If the Central Powers should win, (10) of this business and investment would be lost.

19 Although we normally think of the pyramid as Egyptian, (1) peoples built these huge pointed monuments, too. The most famous (2) Egypt are the ones built to honor the Sun and the Moon in a prehistoric city in Mexico. In Egypt pyramids were built (3) places for burying the pharaohs, the kings of ancient Egypt.

The Egyptians believed there was a life after death. They also believed the body, in the (4) world, had to feed a person's soul. So the Egyptians tried to preserve the body of a (5) person in a lifelike way.

The kings of (6) Egypt, and other important people, were buried in fine tombs (7) the earliest times. In about 2686 BC, a pyramid-shaped tomb was (8) for the pharaoh of the time.

20 Many animals use special sounds to communicate (1) each other. These sounds are (2) the animal's voice.

Our voice is much more complicated than those of any other animals, because of the language we speak. We make (3) with a group of organs based in the throat and mouth. We change that basic sound (4) changing the shape of our mouth and, most importantly, by moving our tongue very quickly and precisely. Our spoken languages would be impossible (5) our thick, quick-moving tongues.

In other animals different sound-producing organs may be used. Crickets 'sing' by rubbing their wings together rapidly, for (6).

The voice of an animal may be used to attract mates, warn off rivals and (7) territory boundaries. The song of a songbird like a blackbird may perform all these (8).

21 For centuries, people's idea about time depended on the way the sun moved across the sky. At midday, the sun was at its highest point. One day was the (1) it took the sun to reach its highest point again. Of course it was not really the (2) that was moving; it only appeared to move because the (3) was rotating once per day.

We then divided the day into 24 smaller units called hours, but our (4) hours are rather different from (5) of 600 years ago. Before mechanical clocks came into use in the 14th century, an hour was one twelfth of the period of daylight. In summer, daylight lasted longer than in winter, so summer hours were longer than winter ones.

With the arrival of mechanical clocks, hours became (6). As clocks became more accurate, time could be measured in (7) units — minutes and seconds. Clocks may use the

same length hour, but they are not all set to give the same time. That is because the sun appears to be at its (8) point in the sky at different times.

22 One knowledge of the moon was vastly expanded in July of 1969, (1) the historic Apollo 11 mission, man's first visit to the lunar surface, was successfully completed. While astronaut Michael Collins remained in orbit about the moon, his (2) astronauts, Commander Neil A. Armstrong and Edwin E. Aldrin Jr., guided their landing craft to a relatively craterless area of the moon. After a brief walk on the surface of the moon and the completion of a variety of tasks aimed (3) gathering information for scientists, Armstrong and Aldrin rejoined Collins in the mother ship for the voyage back to the earth.

The moon is about 3,160 miles (4) diameter, one-fourth the diameter of the earth. Rock samples brought back (5) the Apollo 11 mission prove conclusively that the moon is a lifeless place. The craters (6) cover the moon are still an area of controversy among scientists. Some believe that the craters were formed by great (7) that erupted on the moon thousands of years ago, but we will not know the truth about the craters (8) further lunar exploration is completed.

23 Energy is what makes things move. Food has energy because your body can use it to make your muscles move. Fuels have energy because engines can use them to produce (1). Batteries have energy because they can make electric motors spin around.

Heat is a form of energy. This may be strange because an electric fire does not appear to move when it gets hot. In fact, there is movement, but you cannot (2) it. The atoms in any solid are always (3). If the solid is heated up, its atoms move faster. This means that billions of tiny forces are giving the atoms extra (4).

Scientists measure energy in joules (J). A joule is about as (5) energy as you would need to lift an object of 1 kg about 10 cm. Lifting more objects would need more energy. Lifting them over a greater distance would (6) more energy still.

Whenever a force moves something, scientists say that work is done. The bigger the force and the further it moves, the more work is done. This means that there is a link (7) energy and work. Like energy, work is measured in joules. In lifting an object of 1 kg about 10 cm, you would be doing about one joule of (8).

24 It's interesting to study the origins of words. Words become even more interesting when they are combined into sentences, but we can understand the sentences (1) if we know something about the history of the words of which they are (2). There are many different degrees of knowing the meaning of a word. A superficial reader is content if he knows one of its meanings, but most words have a wide range of different senses, and the relation (3) them repays study. Most of us are content to gain only an approximate idea of the meanings of the words that we encounter while reading, but enjoyment is increased if we read more (4) and discover the exact shade of meaning of at (5) some of the words. Such care, of course, demands a similar care on the (6) of the writer, and when we are turning over the pages of a book to find out if it is worth reading, one of the best indications is in the (7) of a word, usually an unexpected one, use in exactly the right (8) to express a wealth of meaning.

[注] superficial (うわべだけの) content (満足である) repay (甲斐がある) approximate (およその)
encounter (出会う) indication (兆候) a wealth of meaning (豊かな意味)

25 The human face is very flexible. Also humans have two limbs — their arms — that they do not need for (1). So, from the earliest times, humans were probably communicating with each other by pulling faces and making signs with (2) and hands. Speech soon became (3) too.

These methods of communication could only work when the people doing that were fairly (4) each other. Also, the information received could not be stored. However, both of these problems were (5) by the development of writing.

With writing, messages could be (6) from one place to another and then kept. Indeed, some of the messages made four or five thousand years ago are still with us today in museums.

Before people can talk or write to each other, there has to be -28--28--28--28- on (7) the sounds or symbols mean. All communication uses an agreed code, though it may be so familiar (8) we do not even recognize it as a code. The English alphabet, for example, is itself a code, as are all the other alphabets in the world.

[注] flexible (伸縮自在の) limb (手足) code (符号、暗号)

26 This summer I took a job as a shop assistant in the dress department of a large store, and it was an experience I will never (1).

The first customers of the morning were the ladies who had come up to town in (2) to spend the whole day at the stores. Even if they liked a dress very much, they never wanted to buy one at the first store they had come into and would ask me to put it aside for them. Then they would go around to many other stores and would finally appear again just before our store closed and be very (3) if I had sold the dress to another customer while they were away.

Then there were the women who, when you went up to them and offered them your help, would (4) that they were "just joking." They would knock down several dresses while they were "just joking," and not try to hang them up on the rails again. Another type of customer was the one who had nothing more (5) to do with her life than try on dress after dress and look at herself in the mirror, but who never intended to buy anything.

Of course, there were more serious customers, but even with them, selling could be a boring business because so many women took hours to narrow down their choice to two dresses and then could never (6) up their minds between one dress and the other. Sometimes they turned to you for advice, and you had to tell them that one dress suited them perfectly when you wanted to advise them not to (7) either of the two dresses.

The husbands of some of my customers were so eager to get back home for their evening meal that they would say anything even to the most unusual dresses. But I was always (8) to serve the women who brought their husbands with them because at least I knew that I could make a quick sale.
